Week 1 - August 21, 2016 - August 27, 2016

Meeting times and discussions

Discussion:

        In this meeting we discussed our available times to schedule meetings between our group. The advisors and the company liaison representative. We discussed who would be filling the leadership roles of our group. We discussed the description of the project and some of our preliminary ideas about how we envision the project as well as the specialization of our programming backgrounds and how it contributes to the development of the project. In addition to this we made preliminary introductions and discussed our personal background, programming experience availability as well as strengths and weakness toward the project. In this first meeting we also met up Emily Law a JPL liaison representative who gave the first preliminary idea of our project goals.

Results:

        As a result of this meeting we as a group have exchanged contact details such as email and phone number and we have set up google drive for project. We chose our project leaders with Fidel Izquierdo as our Project Leader, with Christopher J Omlor as our Communication leader, and finally Angel Jimenez as our Documentation leader. In addition to choosing our leaders we established research goals towards learning more about the graphics algorithms and techniques we will need to know to succeed in this project. We also set up a spreadsheet to establish a common place to add and discuss questions we have for our project that we will forward to our advisors and liaisons.

Goals:

        Our goals for the next meeting are to have a confirmed schedule that will stay as consistent as possible for future meetings. To have questions about the project specifications as well as usage of the JPL API addressed. To have all the contact information between the group members and the advisors and liaisons addressed. To have a greater understanding of the underlying graphics techniques that will be required to succeed in this project.

Time:

        Starting from the time we arrived in class to when the meeting adjourned we spent 2:30hrs this week on the project. From 10:00 am - 12:30 pm on August 26th, 2016.
