

# Referral ERRA Trending Analysis Tool (RE-TAT)

**Team Members:** Emanoel Khachadorian, Xiaoye Li, Daniel Limas, Henry Liwag, Wilson Thomas, and Philip Tran  
**Faculty Advisor:** Dr. Yuqing Zhu  
**QTC Liaisons:** Kelly Hernandez, Neil DeJesus, Grace Pang-Truong, and Martin Nikoukar  
**Department of Computer Science**  
**College of Engineering, Computer Science, and Technology**  
**California State University, Los Angeles**

## Objective

QTC needs a tool created that will use data from ERRA, weekly provider zip code report, and historical referral data to create a trending analysis tool that will allow them to identify:

- Areas that are missing providers and provide the nearest provider within a range.
- When and where their referrals assigned.

## Architectural Strategies

In the development of RE-TAT, development tools included the following:

- Java Oracle
- Eclipse IDE
- Tomcat Apache 7
- MySQL
- phpMyAdmin
- Bootstrap
- Apache POI Library.

Referral and Provider Check - Results

Result for zipcode 90004: All specialties are within the mile range.

Specialties Met

Claimant ID	Case ID	State	Zipcode	Nearby Provider ID	Nearby Provider Distance	Specialty
4173910	1	CA	90004	44927	4.0	AUD
6912	20	CA	90004	1247	8.0	GEN
1351773	2	CA	90004	1247	8.0	GEN
4077141	2	CA	90004	1247	8.0	GEN

### Feature Description:

- Find providers where referrals are assigned.
- If no providers are available, mark the region being searched.
- Ensure coverage in all required areas.

92251	CA	09/07/2017	OTO	FORT SAM HOUSTON, TX	739099	5

### Feature Description:

- Check between referrals assigned with referrals QTC received.
- Provide comparison data from referrals.

## Conclusion

- Writing the Data Input Parser Module was essential to the success for this project from a technical and organizational standpoint.
- Our project (RE-TAT) will substantially improve QTC Management team's decision-making process in future operations.
