

Full Stack Programming Internship

A Little About RGR

RGR Marketing is an online performance marketing company specializing in lead generation for consumer financial services. We do not just source great leads, we also serve as a strategic partner to help our clients make the most of every lead. We are proud to operate with the highest levels of honesty, integrity, and transparency. We have a proven track record of successfully anticipating and adapting to market changes, and maintaining significant growth over more than a decade in the business. Our goal is to change the lead generation industry through innovation and integrity.

This Should Describe You

- Knowledge and interest in technology.
- Knows enough to be dangerous (HTML/CSS/JavaScript/PHP/MySQL/Linux).
- A self-starter and fast learner.
- Be adaptable and able to pick up new techniques.
- Seeks to develop and master their programming skills.

Responsibilities

- Assist with designing, developing, coding and testing our proprietary platform.
- Assist with integrating clients based on their API requirements.
- Assist with setting up, maintaining, updating and optimizing our hosted sites.
- Assist with all aspects of the product lifecycle, from specifications through QA.
- Collaborate on finding and fixing bugs.
- Participate in agile development of project timelines, implementation design specifications, system flow diagrams, documentation, testing and ongoing support of systems.
- Recommend modifications to processes and procedures, and contribute to best practices, architecture, and implementations.
- Promote and solicit ideas within project team.

Requirements

- Actively pursuing a B.S. in Computer Science or related major, and strong record of academic achievement.
- Programming proficiency in a language (preferably PHP).
- Knowledge of software engineering processes and tools (methods, test development, support, algorithms and data structure).
- Must haves:
 - Strong programming skills (PHP, Java, Python).
 - Object Oriented Programming Experience
 - Unix/Linux experience
 - Strong frontend skills (HTML, CSS, JavaScript).

- Experience building or maintaining Relational Databases (MySQL).
- Solid understanding of how websites work.
- Familiarity with command line.
- Familiarity with version control (Git).
- Experience in one or many of the following is a plus:
 - ES6, Node.JS, JS Framework (Angular JS).
 - Familiarity with LAMP stack.
 - Cross-browser, cross-platform coding.
 - Website analytics and optimization including A/B Testing.
 - Security.
 - Past job/internship experience in a tech capacity.
 - Side projects demonstrating proficiency in various tech stacks.
- You must be legally eligible to work in the US.
- This job requires you to work in our office in El Segundo.

This internship is part-time (20 - 30 hours per week). Interns will also gain valuable hands-on experience working with open source technologies, agile and scrum methodology, and learning the full SDLC in a corporate work environment.
