

Attention all Computer Science/Computer Engineering related majors!

Need to hire **ONE** person to join me in a new startup company as the **CTO(Chief Technology Officer)**.

Hi! My name is Wesley McCovey. I'm 31 years old and I just started/created a tech company. The company in particular is in the legal cannabis industry! You and I will be the first two employees of this new startup venture!

My company in particular is a recreational cannabis delivery and pickup. I know when you cannabis delivery and pickup you think of Weedmaps, Eaze, Speedweed, etc. The difference with my company is that it has recreational delivery and pickup but with a **special niche** that nobody is doing!

Cannabis is a rapidly growing industry. Revenue from this industry is expected to increase roughly from \$17 billion in sales to roughly \$50 billion in sales by 2030. The only way that cannabis can reach the potential of \$50 billion in sales is that we have to innovate and push the cannabis to new heights that's never been seen before.

My vision for this company is to democratize the marijuana buying process and make it mainstream. Cannabis consumption right now is stigmatized. It's not widely accepted on a large scale in the United States compared to Amsterdam or Canada. It's getting to a place of being accepted as more states begin to legalize. Eventually cannabis will be legalized at the federal level in the United States and new and innovative products will emerge from this industry. I believe this company can normalize cannabis usage and bring an end to the negative stigma that surrounds cannabis. Cannabis eventually will be ubiquitous in our society and if we go after this new market in a constructive way, we can be successful. I want to be the "Apple" of cannabis.

I need someone that can build the website and a web app(preferably), write the code and manage the website's functions. Also I need someone that knows how to manage other web developers when we bring on more in the future.

This is a tough position. I CANNOT offer you a salary at the outset. The only way I can offer you a salary is if/when we get venture capital investment. The only thing I can offer is equity in the company. If selected for this position, the equity you will receive will be 30%. Given the success rate of startups, it's not a very positive outlook. 90% of startup companies fail. Luckily for you, I have a huge vision of where this company can go. You also have nothing to lose, but everything to gain! Remember, we're building a company not a startup.

If that person is you, please respond to this email with your name and a copy of your resume. I will set up interviews with everyone that applies. This is a FULL TIME position and I want to get this company started as soon as possible. Thank you, and I hope to speak to you soon!

Requirements:

- Masters in computer science/computer engineering or equivalent REQUIRED.
- Experience in building and websites.
- App development skills PREFERRED but not required.
- Good people skills.

- Managerial or related work experience PREFERRED.
- Knowledge about cannabis and its derivatives(CBD, vapes) PREFERRED.
